

BIO Herb Mix

BIO Herb Mix is a **propagation substrate** with pure organic fertilization and sustainable raw materials for the cultivation of herbs, spice plants, aromatic and ornamental plants in plates, boxes and pots.

The pure organic fertilization permits biological cultivation according to EC regulation **No. 834/2007**.

BIO Herb Mix offers the following special advantages:

- high structure stability, very good drainage by the white peat and coco fibres addition, good rewetting ability by CocoSol®
- good pH- and nutrients buffering ability, good water retention by the part of frozen black peat
- the share of substrate compost improves the biological activity and contributes to the nutrient supply
- good nutrients content by the using of well-balanced mix of organic fertilizers

Composition:	50 % white peat
	20 % black peat
	10 % coco fibres
	10 % CocoSol®
	10 % substrate compost
	3500 g organic fertilizer (9/4/3)/m ³
	2500 g organic fertilizer (6.5/5/1)/m ³
	200 g Kieserit/m ³
	150 g trace elements/m ³

Structure: medium

Chemical values: pH-value (CaCl₂): 5,9
(according to LUFA)** salt content*: 0,8 - 1,3 g/l

*The release of the fertilizer depends on the temperature. The substrate should be used at once and not be stored.

We recommend **BIO Herb Mix** for cultivation of herbs in pots > 7 cm.

Packing: bags of 70 l, Maxi-Block 3,75 m³, in bulk (EN 12580)

**LUFA: independent, public laboratory
