

## PRO Start Calluna

**PRO Start Calluna** is a special propagation substrate with a fine structure and a high share of white peat for acidophilic plants like Calluna and Erica

**PRO Start Calluna** offers the following advantages:

- increased air capacity and high structural stability by the high share of white peat and the Perlite
- quick water absorption by the wetting agent and the share of sand
- good drainage by the part of sand

**Composition:** 85 % white peat (H3 - H5)  
15% Perlite /m<sup>3</sup>  
50 l sand /m<sup>3</sup>  
100 ml wetting agent /m<sup>3</sup>  
150 g trace elements/m<sup>3</sup>

**Structure:** fine

**Chemical values:** pH-value (CaCl<sub>2</sub>): 4,0 – 4,5  
(according to LUFA\*) Salt content: < 0,4 g/l  
Nitrogen, N: 20 - 30 mg/l  
Phosphorus, P<sub>2</sub>O<sub>5</sub>: 10 - 20 mg/l  
Potassium, K<sub>2</sub>O: 20 - 30 mg/l

We recommend **PRO Start Calluna** for the filling of cultivation plates with cells > 2,5 cm in diameter.

Packing: bags 70 l, Maxi-Block 3,75 m<sup>3</sup>, in bulk (EN)

\*LUFA: independent, public laboratory
