

WPS coarse F

WPS coarse F (White peat substrate coarse, fertilized) is a potting substrate for a wide range of ornamental plants and nursery plants like trees and shrubs with a medium to high salt compatibility.

WPS coarse F offers the following advantages:

- high air capacity and elevated drainage
- high substrate stability
- increased rewetting ability by the wetting agent

Composition: 100 % white peat (H3 – H5)
1200 g fertilizer PG-Mix (NPK 14-16-18)/m³
+ trace-elements
+ wetting agent

Structure: coarse

Chemical values: pH-value (H₂O): 5,5 - 6,5
(according to LUFA*) Salt content: 0,8 - 1,3 g/l
Nitrogen, N: 120 - 200 mg/l
Phosphorus, P₂O₅: 140 - 240 mg/l
Potassium, K₂O: 190 - 310 mg/l

We recommend **WPS coarse F** for pots \geq 15 cm.

Packing: bags 250 l, Maxi-Block 4,5 m³ (EN)

*LUFA: independent, public laboratory
