PRO Start + Perlite

PRO Start + Perlite possesses a fine structure and a high share of white peat. The substrate is used for the propagation of plants, for sowing, prickling and for cuttings.

PRO Start + Perlite offers the following advantages:

- increased air capacity, high structure stability and improved drainage ability by the Perlite and the high share of white peat
- high water capacity by the share of frozen black peat

Composition:  
70 % white peat  
20 % black peat  
10 % Perlite  
500 g NPK fertilizer (14-10-18)/m³  
+ wetting agent  
+ trace elements

Structure: fine

Chemical values: (according to LUFA*)
pH-value (CaCl₂): 5.7  
Salt content: 0.5 g/l  
Nitrogen, N: 70 mg/l  
Phosphorus, P₂O₅: 50 mg/l  
Potassium, K₂O: 90 mg/l

We recommend PRO Start + Perlite for the filling of cultivation plates with cells > 2.5 cm in diameter. For smaller cells we recommend Typ 3 special.

Packing: bags 70 l, Maxi-Block 3.75 m³, in bulk (EN)

*LUFA: independent, public laboratory
