Typ 3

Typ 3 has a fine structure and is used for the propagation of plants, for sowing, pricking and cuttings.

Typ 3 offers the following advantages:

- great structural stability of the substrate and air capacity by the share of white peat
- high water retention and buffering capacity of pH-value by the balanced part of frozen black peat

Composition: 65 % white peat  
35 % black peat  
500 g NPK- fertilizer /m³

Structure: fine

Chemical values:  
- pH-value (CaCl₂): 5.7  
- Salt content: 0.5 g/l  
- Nitrogen, N: 70 mg/l  
- Phosphorus, P₂O₅: 50 mg/l  
- Potassium, K₂O: 90 mg/l

We recommend Typ 3 for the filling of cultivation plates with cells > 2.5 cm in diameter. For smaller cells we recommend Typ 3 special.

Packing: bags 70 l, Maxi-Block 3.25 m³, in bulk (EN).

*LUFA: independent, public laboratory
