Typ 4 soft

Typ 4 soft is a blocking substrate with a fine structure and higher share of white peat. Typ 4 soft is used for the propagation of salt-tolerant young vegetable plants in peat blocks as well as for ornamental plants also cultivated in larger blocks.

Typ 4 soft offers the following advantages:

- high water retention and buffering capacity of pH-value because of the frozen black peat
- better drainage und root development by the share of white peat
- quicker water absorption in case of drying out by the high share of white peat

Composition: 65 % black peat
35 % white peat
1600 g NPK- fertilizer /m³
+ binding agent

Structure: fine

Chemical values: (according to LUFA*)
  pH-value (CaCl₂):  5,7
  Salt content:  1,3 g/l
  Nitrogen, N:  220 mg/l
  Phosphorus, P₂O₅:  160 mg/l
  Potassium, K₂O:  280 mg/l

We recommend Typ 4 soft for salt-tolerant young vegetable plants and ornamental plants cultivated in larger blocks.

Packing: bags 70 l, Maxi-Block 2,75 m³, in bulk (EN)

*LUFA: independent, public laboratory
